

Household Donor

Member CRUD Responsibilities | Current implementation

Share household food and manage donations through pickup and delivery.

Part 1 - Donation Workflow

Create	Create and publish household food donations with food details, quantity, pickup location, and collection deadline.
Read	View own donations, donation details, History, collection progress, dashboard statistics, and delivery notifications.
Update	Edit own Published donations through the connected donation screens. Track subsequent status changes made by the assigned volunteer.
Delete	Delete own Published donations after confirmation through the connected donation details screen.

Workflow rule: Only the owner can edit or delete a donation, and only while Published. Accepted donations continue through the NGO and volunteer workflow.

Part 2 - Account Management

Create	Register a household donor account with login credentials and contact information. Upload a profile photo and submit a support request.
Read	View personal information, profile photo, role statistics, and account preferences on the Profile page.
Update	Edit name, email, phone, and location. Replace the profile photo and change notification preferences.
Delete	Remove the profile photo or delete the account with current-password confirmation. Account deletion is blocked while donations or pickups are active.

Account deletion: Personal information is anonymized and access tokens are removed. Completed donation history is retained with the participant shown as Deleted account.

CRUD: Create = add a record; Read = view records; Update = edit records; Delete = remove or deactivate records. Actions described as unavailable are not implemented for that role.
