

Volunteer

Member CRUD Responsibilities | Current implementation

Carry out assigned pickups and keep every participant informed of delivery progress.

Part 1 - Donation Workflow

Create	Add pickup notes or progress updates to assigned donations. Status transitions save collection activity records.
Read	View assigned donations, pickup details and locations, donor and NGO information, collection history, statistics, and assignment notifications.
Update	Update assigned collection status in order: Assigned -> Pickup Started -> Arrived -> Collected -> Delivered. Also update volunteer availability.
Delete	No donation or assignment deletion is provided to volunteers. Assigned work is completed through status updates.

Workflow rule: Only the assigned volunteer can update collection progress. Delivered status is reflected in donor and NGO views and creates a completion notification for the donor.

Part 2 - Account Management

Create	Register a volunteer account with login credentials and contact information. Upload a profile photo and submit a support request.
Read	View personal information, profile photo, role statistics, and account preferences on the Profile page.
Update	Edit name, email, phone, and location. Replace the profile photo and change notification preferences. Change pickup preferences through the volunteer preference screens.
Delete	Remove the profile photo or delete the account with current-password confirmation. Account deletion is blocked while donations or pickups are active.

Account deletion: Personal information is anonymized and access tokens are removed. Completed donation history is retained with the participant shown as Deleted account.

CRUD: Create = add a record; Read = view records; Update = edit records; Delete = remove or deactivate records. Actions described as unavailable are not implemented for that role.
